2/28/25 HVAC boiler and AHU coil repair		
<b>Description of Work</b>	1	\$0.00
Called out for knight crest 90% 2.5M BTU boiler not working. Gained access to unit. Unit had error code for delta T. Facilities staff alerted me of an air handler leaking water. Checked out air handler to find the heating water coil had froze and burst causing water to drain out of air handler and draining the whole loop. Valves off air handler and started refilling the loop. Refilled the loop and bled the air out of the system. Reset the boiler and got it back online. Building started getting back up to temperature. Adjusted temperature curve of system to run at optimal efficiency. Returning to repair coil. Disassembled air handler to get to coil and located leak. Repaired leak and verified no other leaks. Reassembled air handler. Got air handler back online and heating. Checked fresh air damper to be in the lowest setting. Found the freeze thermostat not working properly. Went to supply house and got new freeze thermostat. Removed old freeze thermostat and installed new one. Heating water loop working as designed.
